**Preparation of Device & Patient**

- **Note:** Upon removal, inspect the catheter for any damage.
- **Step 1:** The fill line will close when the Auto-Valve™ fill line is removed. Before administering the medication, ensure the fill line is secured.
- **Step 2:** Open the retention balloon by depressing the syringe plunger. If the signal (300%) indicator does not expand once inflation has reached the optimal level for the patient, it will not expand. Repeat the procedure. If the signal does not expand, do not use the device and notify the health care professional.
- **Step 3:** Ensure the device is properly seated by checking the position indicator line relative to the position of the sphincter.
- **Step 4:** The finger may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 5:** The flexi-seal.saline is inserted into the rectum to contain and divert faecal waste in the colon.
- **Step 6:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 7:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 8:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 9:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 10:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 11:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 12:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 13:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 14:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 15:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 16:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 17:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 18:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 19:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 20:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 21:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 22:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 23:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 24:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 25:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 26:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 27:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 28:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 29:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 30:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 31:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 32:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 33:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 34:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 35:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 36:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 37:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 38:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 39:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 40:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 41:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 42:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 43:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 44:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 45:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 46:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 47:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 48:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 49:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 50:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 51:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 52:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 53:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 54:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 55:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 56:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 57:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 58:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 59:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 60:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 61:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 62:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 63:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 64:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 65:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 66:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 67:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 68:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 69:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 70:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 71:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 72:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 73:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 74:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 75:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 76:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 77:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 78:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 79:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 80:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 81:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 82:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 83:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 84:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 85:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 86:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 87:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 88:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 89:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 90:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 91:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 92:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 93:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 94:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 95:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 96:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 97:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 98:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 99:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 100:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 101:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 102:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 103:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 104:** The patient may be removed or remain in place in the rectum during initial balloon inflation.
- **Step 105:** The patient may be removed or remain in place in the rectum during initial balloon inflammation.
- **Step 106:** The patient may be removed or remain in place in the rectum during initial balloon inflammation.
